## Lift General Catalogue

## Profile

Pizzato Elettrica devices have been used for many years in the lift sector, for their proven reliability and quality to price ratio. Some of the products shown here have been the first choice of some of the most important multinational players; they are therefore used throughout the world. The range of position switches, traditionally used in the lift sector, is vast; for this reason, the following pages contain just some of the Pizzato Elettrica products available, chosen from those typically used in this sector. We, as a company, can however supply other switch types. For example, custom versions to better meet the demands of customers.

Pizzato Elettrica has also developed some series of products aimed specifically at the lift sector: for example, switches for speed limiters, devices to carry out floor levelling operations, or our control stations.

All of the products listed in this catalogue are produced entirely by Pizzato Elettrica - with the passion for quality that has always set our company apart.

MORE THAN 300 PROFESSIONALS WITH PASSION

It is people, with their professionalism and dedication that make a great company. This profound conviction has always guided Pizzato Elettrica in their choice of employees and partners.

Today, Giuseppe and Marco Pizzato lead a tireless team providing the fastest and most efficient response to the demands of the market. This team has grown over the last 10 years and has achieved a considerable increase in sales in all the countries where Pizzato Elettrica is present.

The various strategic sectors of the business are headed by professionals with significant experience and expertise. Many of these people have developed over years with the company.

Others are experts in their specific field and have integrated personal experience with the Pizzato Elettrica ethos to extend the company's capability and knowledge.

From the design office to the technical assistance department, from managers to workers, every employee believes in the company and its future. Pizzato Elettrica employees all give the best of themselves secure in the knowledge they are the fundamental elements of a highly valuable enterprise.

## 100\% MADE IN ITALY

Pizzato Elettrica is one of the leading European manufacturers of position switches, microswitches, safety devices, safety modules, foot switches, control and signalling devices, and devices for lifts.
An entrepreneurial company such as Pizzato Elettrica bases its foundations on a solid and widely shared value system. The pillars that form the basis of the company's work have remained constant, and constitute the fundamental guiding principles for all company activities.

## PASSION FOR QUALITY

Passion for product quality, orientation towards excellence, innovation, and continuous development, represent the key principles of Pizzato Elettrica's everyday work.
Anyone using Pizzato Elettrica's products does so in the certainty that these devices are of certified quality, since they are the result of a process that is scrupulously controlled at every stage of the production. The company's goal is to offer the market safe, reliable, and innovative solutions.

## CARE FORTHE CUSTOMER

In order to be successful, a product must respond to the specific needs of those who will use it. Market developments must be carefully monitored in order to understand, in advance, which new applications will prove themselves truly useful. This is why Pizzato Elettrica has always cultivated close synergies with the companies that have chosen it as a supplier, using this continuous dialogue to identify the potential developments of the own product range in order to make it highly flexible, complete and capable to respond to the most diverse needs.

## 100\% MADE IN ITALY

All Pizzato Elettrica products are designed, developed, and tested entirely at the company plants in Marostica, in the province of Vicenza in Italy. The company is thus able to meet specific customer requirements at all times, by offering a comprehensive range of products and technologically advanced solutions.

## 1984: AN ENTREPRENEURIAL STORY BEGINS

1984 The company Pizzato di Pizzato B. \& C. snc. manufacturer of position switches is founded.

1988 The company becomes a limited liability partnership, and is renamed Pizzato Elettrica, a brand shortly destined to become renowned and valued nationwide.
The first company-owned plant (P1) geared towards mechanical processing was built.

1990 By the end of the decade, thanks to the development of quality products and the experience built on the Italian market, Pizzato Elettrica turns to the international market.

1995 Building of the second plant (P3) geared towards the moulding of plastic materials. Development of the position switch range continues in parallel. Start of significant years in terms of safety devices planning. The safety sector becomes a key sector to the company.

1998 Construction of the third plant (P4), housing the assembly department.

2002 Achievement of the ISO 9001:2000 certification. Launching of the first safety modules. The new factory headquarters and logistics centre (P5) is built and will remain the company's headquarters for many years. Continued expansion of the industrial safety and automation product range.

2007 Pizzato Elettrica faces its first generational change: Giuseppe and Marco Pizzato take over the company directorship.

2010 Extension of Pizzato Elettrica product portfolio, with the launch of the innovative EROUND line consisting of control and signalling devices. This product range accompanies position switches and safety devices, thus offering complete solutions to customers.

2012 Introduction of Gemnis Studio, the first software produced by Pizzato Elettrica. A graphic development environment for the creation, simulation, and debugging of programs that can be integrated in the Gemnis line modules.

2013 Foundation of first subsidiary of Pizzato Elettrica, Pizzato Deutschland GmbH, in Germany.

2014 A new production facility (P8) dedicated to switches and automatic machines is opened, spanning a surface area of $6000 \mathrm{~m}^{2}$.

2016 The new NS series of safety switches with electromagnets and RFID technology is introduced, fruit of the company's experience, spanning more than thirty years in the field of industrial safety. To date it is the state of the art in its industry. Foundation of second subsidiary of Pizzato Elettrica, Pizzato France SARL, in France.

2017 The company continues to expand and achieves the quality certification based on the more recent version of standard ISO 9001 of 2015.
In Spain, the third Pizzato Elettrica subsidiary is founded: Pizzato Iberica SL.
The foundation stone is laid for the new factory (P6), which is to become the company's headquarters.

2018 The safety handle P-KUBE Krome is launched, a brand new product in the market, confirming that Pizzato Elettrica thrives on innovation in the sectors of automation and industrial safety.
Foundation of fourth subsidiary of Pizzato Elettrica, Pizzato USA Inc, in the United States.

2019 The new factory (P6) is opened, a modern building of $28,000 \mathrm{~m}^{2}$ realized with the most advanced Industry 4.0 technologies, where all offices and production divisions are transferred, allowing to further improve the flow of material and information.
The logistics and shipment department is optimised with the introduction of a new completely automated warehouse.

2021 Pizzato Elettrica India Ltd. and Pizzato Korea Ltd., commercial branches of Pizzato Elettrica, are established in India and South Korea, respectively.

Today, Giuseppe and Marco Pizzato lead a company in constant growth in terms of new product launches, number of employees, turnover, and new markets. Pizzato Elettrica is continuing its new product internationalisation and development process.

## 100 MILLION PARTS SOLD WORLDWIDE

Pizzato Elettrica's product catalogue contains more than 7,000 articles, with more than 1,500 special codes developed for devices personalised according to clients' specific needs.
Pizzato Elettrica devices can be grouped, according to typology, into three main macro-categories.

## POSITION SWITCHES

Pizzato Elettrica position switches are daily installed in every type of industrial machinery all over the world for applications in the sector of wood, metal, plastic, automotive, packaging, lifting, medicinal, naval, etc.
In order to be used in a such wide variety of sectors and countries, Pizzato Elettrica position switches are made to be assembled in a lot of configurations thanks to the various body shapes, dozens of contact blocks, hundreds of actuators and materials, forces, assembling versions.
Pizzato Elettrica can offer one of the widest product range of position switches in the world. Moreover, the use of high quality materials, high reliability technologies (e.g. twin bridge contact blocks) as well as the IP67 protection degree make this range of position switches one of the most technologically evolved.

## SAFETY DEVICES

The company Pizzato Elettrica has been one of the first Italian companies developing dedicated items for this sector, creating and patenting dozens of innovative products, thus becoming one of the main European manufacturers of safety devices.
The vast range of products aimed specifically at the safety of machinery, fully designed and assembled at the Marostica (VI) company premises, includes not only more traditional safety switches with separate actuator (with or without locking mechanism) and hinge switches but also state-of-the-art antitampering devices with RFID technology, such as the ST series sensors, and NG and NS series locking devices.
The product range is complemented by safety handles for guards, with the innovative P-KUBE Krome model whose grip can be illuminated with multicolour signalling LEDs, as well as by the CS series safety modules, available in single function versions, or user-programmable with the use of the Gemnis Studio software; fully implemented by Pizzato Elettrica and distributed with a free
licence.

## HUMAN-MACHINE INTERFACE

Pizzato Elettrica's control and signalling devices of the EROUND line are designed for the use in the human-machine interface sector. Thanks to the elegant design, the care for details and the elegance of the product combined with its maximum safety and reliability, this series is one of the most complete and cuttingedge on the market.

In order to satisfy its customers' needs and requests, Pizzato Elettrica offers a lot of accessories purposely designed not only to complete its wide range of products, but also to help device installation on machineries.

## MILLIONS OF CERTIFIED PRODUCT CODES

A simple brand isn't enough: the company is aiming for the Pizzato Elettrica brand to be widely recognised as a synonym for absolute quality and certainty.

A result that has been reached and consolidated over the years, updating and expanding the series of certifications obtained from the most important Italian and international control organisations. Product quality is assessed by five accredited external bodies: IMQ, UL, CCC, TÜV SÜD, EAC. These bodies lay out high technical and qualitative standards for the company to achieve and maintain, verified yearly with several inspections: these are performed, without prior notice, by qualified inspectors, who extract samples of products and materials destined for sale from plants, or from the market directly, to subject them to apposite tests.

- CE MARK. All Pizzato Elettrica products bear the CE marking in conformity with the European Directives in force.
- ISO 9001 CERTIFICATION. The company's production system is compliant with the international ISO 9001 standard, in its most recent 2015 revision. The certification covers all of the company's plants and their production and managerial activities: entry checks, technical, purchasing and commercial department activities,
manufacturing operations assessments, final pre-shipping product tests and checks, equipment reviews and the management of the metrological lab.
The Pizzato Elettrica quality management system ensures that all sensitive company processes - from component design to implementation, from materials provisioning to verification of non-compliant products - are carried out according to the procedures laid down, with the aim of providing our customers with continuously improved and reliable products.
- CERTIFICATION OF COMPANY QUALITY SYSTEMS. Pizzato Elettrica has obtained the certificate of compliance with the UNI EN ISO 9000 regulations in force in Italy and abroad. It is issued by a recognised independent body that guarantees the quality and reliability of the service offered to clients worldwide.
- CSQ, CISQ AND IONET. The CSO system is part of the CISQ (Italian Certification of Quality Systems) federation, which consists of the primary certification bodies operating in Italy in the various product sectors. CISQ is the Italian representative body within IQNet, the biggest international Quality Systems and Company Management certification network, which is adhered to by 25 certification organs in as many countries.

The purpose of these subsidiaries is to coordinate and support the activities of representative agencies, or distributors, present in the various countries, managing marketing and sales activities, with further objectives of increasing brand visibility and penetration capacity of Pizzato Elettrica products in markets considered strategic.
Products from Pizzato Elettrica are currently used in over 80 countries: The commercial support network, which is made up of local professional and experienced representatives, combined with the productive capacity of the headquarters in Italy, are the basis for the formation of a group that, together with its partners, has all the necessary requirements to become one of the most important companies in the field of automation and industrial safety.

## TECHNICAL AND SALES ASSISTANCE

## TECHNICAL DEPARTMENT

The Pizzato Elettrica technical department provides direct technical and qualified assistance in Italian and English, helping in this way the customers to choose the suitable product for their own application explaining the characteristics and the correct installation.

Office hours:
Monday to Friday
08:00 am - 12:30 pm / 02:00 pm - 05:30 pm CET
Telephone:
E-mail:
+39.0424.470.930
tech@pizzato.com
Spoken languages:

## SALES DEPARTMENT

Among the strengths in the company relationship with the commercial network, the direct assistance guaranteed in five languages: Italian, English, French, German and Spanish. A service that confirms Pizzato Elettrica quality and attention to the needs of customers from around the world.
Office hours:
Monday to Friday 08:00 am - 12:30 pm / 02:00 pm - 05:30 pm CET
Telephone: +39.0424.470.930
E-mail: info@pizzato.com

## TRADE FAIRS AND EVENTS

## TRADE FAIRS

Pizzato Elettrica regularly participate to many trade fairs in Italy and abroad, presenting in this way to the market the products, the latest news, etc.

## EVENTS

Besides offering qualified technical assistance, Pizzato Elettrica presents itself as a dynamic partner who is attentive to the needs of its customers. For this reason, the company organises several meetings and training courses with particular attention to the regulatory aspect of machinery safety.

## WEBSITE WWW.PIZZATO.IT

## PRODUCT NEWS

Visit the website at www.pizzato.com to stay updated on all the news regarding product launches, to view the entire range of products created by Pizzato Elettrica, and to consult all the documentation provided.

## SEARCH USING FILTERS

You can find the product you want by entering the relative item code, or use the filters provided to create the item most adapted to your particular requirements, by choosing the features it needs to offer.

## BROWSABLE, DOWNLOADABLE CATALOGUE

Users can download the complete catalogue or alternatively browse it directly online, an extremely handy solution for those wishing to consult the range of products simply and rapidly.

## HIGH RESOLUTION IMAGES

The information provided for each product is complete with high resolution images to offer visitors to the website a clear, accurate view of the items in close detail, also offering them the possibility to zoom in and out on the image.

## USAGE INSTRUCTIONS

You can download product usage or installation instructions, in PDF format, to your computer.

## 2D AND 3D FILES

2D and 3D drawings are available for every item; in formats that are compatible with the widest variety of drawing programs.

## CERTIFICATES AND EC DECLARATIONS OF CONFORMITY

The latest product type approval certificates, and EC declarations of conformity in accordance with applicable European product directives, are published on the website.

## LARGE VIDEO SECTION

The large video section of the website is capable of showcasing the main characteristics, functions and use of the various products.

## MULTILINGUALTRANSLATIONS

The website's multilingual versions allow the clients of the global market to find all the information they need in one place.

## EL AD series control stations

- Larger dimensions, to enable use of a greater number of devices
- Easy to configure, thanks to the wide selection of available covers
- Simplified wiring, due to the sockets on the cover
- Sturdy protection guards
- Up to 6 lateral M20-M25-M16 knock-out conduit entries, and 4 bottom M20 knock-out entries
- Knurled base for easy grip on control station

## EL AD series control stations with reduced 60 mm height

- Versions with height reduced to 60 mm , suitable for cramped spaces in lift shaft
- Standard contact block and device dimensions
- Wall fixing hook
- Built-in devices and electrical socket

## Products compliant with standards EN 81-20 and EN 81-50

- International standards EN 81-20 and EN 81-50 set new, updated, technical and safety requirementsin comparison to current standards. They are a significant development in terms of lift construction and installation
- Pizzato Elettrica products intended for use in the lift industry are implemented in accordance with standards EN 81-20 and EN 81-50, in order to provide specific and up-to-date solutions to meet the demands of the market
- All devices meet requirements laid down by the new standards for safety contacts

## Signalling boxes compliant with standards EN 81-20 and EN 81-50

- $12 \mathrm{Vac} / \mathrm{dc}$ or $24 \mathrm{Vac} / \mathrm{dc}$ signalling box, complete with luminous discs and buzzers
- Signalling via luminous disc with flashing yellow light
- Signalling via luminous disc with steady white light, with an intensity of 5 lux at a distance of 1 metre; as laid down in EN 81-20 paragraph 5.4.10.4
- Buzzers with continuous or pulsed tone, with minimum 55 dB sound intensity at a distance of 1 metre; as laid down in EN 81-20 paragraph 5.12.1.8.3(G).

## Padlockable protection for bypass device

- Padlockable protection for bypass device, to allow maintenance of floor and cabin doors, and of door locking devices, as laid down in EN 81-20 paragraph 5.12.1.8
- With padlockable, snap-on protection cover to prevent unintended use of the device
- Ability to lock with padlocks
- Padlockable protection for mounting on Pizzato EL series control stations, or on any electrical panel with compatible hole pattern

## EL AC series control station holder

- The EL AC control stations are also suitable for wall mounting, using the holder designed for this purpose
- The reinforced structure and fitted design ensure easy insertion of the control station, secure hold, and sturdy protection
- The snap-in attachment lets you know that the control station is held firmly in place

## Bypass switches

- Changeover switches with up to 4 positions, with various NO and NC contact configurations
- Available with panel or DIN rail mounting
- Available with padlockable, snap-on protection guard to prevent unintended use of the device
- Suitable for installation on EL series control stations

## Technical data

## Housing

Housing made of glass fibre reinforced technopolymer, self-extinguishing, shock-proof and with double insulation: $\square$
FR series, one conduit entry:
M20×1.5 (standard)
FX series, two knock-out threaded conduit entries:
Protection degree acc. to EN 60529:
M20x1.5 (standard)
IP67 with cable gland of equal or higher protection degree

## General data

Ambient temperature:
Max. operating frequency:
Mechanical endurance:
Mounting position:
Safety parameter $\mathrm{B}_{100}$ :
Mechanical interlock, not coded:
Tightening torques for installation:
Wire cross-sections and
wire stripping lengths:
$-25^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (standard)
$-40^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (T6 option)
3600 operating cycles/hour
20 million operating cycles any
40,000,000 for NC contacts
type 1 acc. to EN ISO 14119
see page 141
see page 153

## In compliance with standards:

IEC 60947-5-1, EN 60947-5-1, EN 60947-1, EN 50047, IEC 60204-1, EN 60204-1, EN ISO 14119, EN ISO 12100, IEC 60529, EN 60529, EN IEC 63000, EN 81-20, EN 81-50, UL 508, CSA 22.2 No. 14

## Approvals:

IEC 60947-5-1, UL 508, CSA 22.2 No.14, GB/T14048.5-2017.

## Compliance with the requirements of:

Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.
Positive contact opening in conformity with standards:
IEC 60947-5-1, EN 60947-5-1.

## Installation for safety applications:

Use only switches marked with the symbol $\Theta$ next to the product code. Always connect the safety circuit to the NC contacts (normally closed contacts: 11-12, 21-22 or 31-32) as stated in standard EN 81-20 par. 5.11.2.2.1. Actuate the switch at least up to the positive opening travel shown in the travel diagrams on page 142. Actuate the switch at least with the positive opening force, reported in brackets below each article, next to the actuating force value.
§ If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on pages 139 to 146.

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x.
- Mechanical service life $>10^{6}$ cycles.

## Protection degree IP67

All switches of these series have protection degree IP67.

## Rubber rollers

Various actuators are available with rubber rollers. Customers can therefore use the most suitable product for the speed of their particular lift, to reduce cabin noise to a minimum

## Adjustable levers

For switches with swivelling lever, the lever can be adjusted in $10^{\circ}$ steps over the entire $360^{\circ}$ range. The positive movement
 transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft as prescribed for safety applications by the German standard BG-GS-ET-15.

## Cable outlets

Switches available with cable outlets in various directions, for use in the most confined of spaces.

## Reversible levers

For switches with swivelling lever, the lever can be fastened on straight or reverse side maintaining the positive coupling.
In this way two different working planes of the lever are possible.

Adjustable safety lever

The adjustable lever code 56 (and variants) is provided with a notching that prevents the sliding also in case the fastening screw becomes loose

## Adapter plates

Fixing plate with large slotted holes for switching point adjustment. Developed for backwards compatibility with previous products.
Each plate is provided with two pairs of mounting holes, one for standard switches and one for switches with reset device. The actuator thus always has the same actuating point.

## Head with variable orientation

The head of all switches is adjustable in $90^{\circ}$ steps.

## Operation of contact block 16 with independent contacts

The contact block 16 is provided with two NC contacts, both with positive opening, that can be independently switched depending on the lever turning direction.

## Extended temperature range

These devices are also available in a special version suitable for an ambient operating temperature range from $+80^{\circ} \mathrm{C}$ up to $-40^{\circ} \mathrm{C}$
They can therefore be used for applications in cold stores, sterilisers, and other equipment operated in very low-temperature environments. The special materials used to produce these versions retain their characteristics even under these conditions, thereby expanding the installation possibilities.

## Main features

- Technopolymer housing, one conduit entry
- Protection degree IP67
- Stainless steel fixing plates
- Wired versions
- Versions with gold-plated silver contacts

## Quality marks:

IMO approval: UL approval: CCC approval: EAC approval:

## Technical data

## Housing

Housing made of glass fibre reinforced technopolymer, self-extinguishing, shock-proof and with double insulation:
One threaded conduit entry:
Protection degree acc. to EN 60529:
M20x1.5 (standard)
IP67 with cable gland of equal or higher protection degree

## General data

Ambient temperature:
Max. operating frequency:
Mechanical endurance:
Mounting position:
Safety parameter $\mathrm{B}_{100}$ :
Mechanical interlock, not coded:
Tightening torques for installation:
Wire cross-sections and
wire stripping lengths:
$-25^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (standard)
$-40^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (T6 option)
3600 operating cycles/hour
20 million operating cycles
any
40,000,000 for NC contacts
type 1 acc. to EN ISO 14119
see page 143
see page 153

## In compliance with standards:

IEC 60947-5-1, EN 60947-5-1, EN 60947-1, EN 50041, IEC 60204-1, EN 60204-1, EN ISO 14119, EN ISO 12100, IEC 60529, EN 60529, EN IEC 63000, EN 81-20, EN 81-50, UL 508, CSA 22.2 No. 14
Approvals:
IEC 60947-5-1, UL 508, CSA 22.2 No.14, GB/T14048.5-2017.

## Compliance with the requirements of:

Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.

## Positive contact opening in conformity with standards:

IEC 60947-5-1, EN 60947-5-1.

## Installation for safety applications:

Use only switches marked with the symbol $\Theta$ next to the product code. Always connect the safety circuit to the NC contacts (normally closed contacts: 11-12, 21-22 or 31-32) as stated in standard EN 81-20 par. 5.11.2.2.1. Actuate the switch at least up to the positive opening travel shown in the travel diagrams on page 143. Actuate the switch at least with the positive opening force, reported in brackets below each article, next to the actuating force value.
$\widehat{4}$ If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on pages 139 to 146.

| Electrical data |  | Utilization category |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Thermal current ( $\mathrm{t}_{\text {th }}$ ): | 10 A | Alternating current: AC15 (50 $\div 60 \mathrm{~Hz}$ ) |  |  |  |
| Rated insulation voltage ( $\mathrm{U}_{\mathrm{i}}$ ): | 500 Vac 600 Vdc 400 Vac 500 Vdc |  |  |  |  |
| Rated impulse withstand voltage ( $\mathrm{U}_{\text {imp }}$ ) : | 6 kV | $\mathrm{I}_{\mathrm{e}}(\mathrm{A})$ | 6 | 4 | 1 |
| Conditional short circuit current: | 4 kV (contact block 20) 1000 A acc. to EN 60947-5-1 | Direct current: DC13 |  |  |  |
| Protection against short circuits: | type aM fuse 10 A 500 V | $U_{e}(\mathrm{~V})$ | 24 | 125 | 250 |
| Pollution degree: | 3 ( | $\mathrm{I}_{\mathrm{e}}(\mathrm{A})$ | 3 | 0.55 | 0.3 |

## Features approved by IMO

## Features approved by UL

Electrical Ratings:
Q300 pilot duty ( $69 \mathrm{VA}, 125-250 \mathrm{~V}$ dc) A600 pilot duty ( 720 VA, $120-600 \mathrm{~V} \mathrm{ac}$ ) Environmental Ratings: Types 1, 4X, 12, 13
For all contact blocks use 60 or $75^{\circ} \mathrm{C}$ copper (Cu) conductors, rigid or flexible, wire size 12, 14 AWG. Tightening torque for terminal screws of 7.1 lb in ( 0.8 Nm ).
The hub is to be connected to the conduit before the hub is connected to the enclosure.
Please contact our technical department for the list of approved products.

## Compliant with EN 81-20 and EN 81-50

$\uparrow \downarrow$

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x
- Mechanical service life $>10^{6}$ cycles.

Rubber rollers

Actuators are available with rubber rollers of varying degrees of elasticity. Customers can therefore use the most suitable product for the speed of their particular lift, to reduce cabin noise to a minimum

## Adjustable safety lever

The adjustable lever code 56 (and variants) is provided with a notching that prevents the sliding also in case the fastening screw becomes loose.

Protection degree IP67

|P67
All switches of this series have protection degree IP67.

## Extended temperature range

$-40^{\circ} \mathrm{C}$
These devices are also available in a special version suitable for an ambient operating temperature range from $+80^{\circ} \mathrm{C}$ up to $-40^{\circ} \mathrm{C}$. They can therefore be used for applications in cold stores, sterilisers, and other equipment operated in very low-temperature environments.

## Adjustable levers

For switches with swivelling lever, the lever can be adjusted in $10^{\circ}$ steps over the entire $360^{\circ}$ range. The positive movement
 transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft as prescribed for safety applications by the German standard BG-GS-ET-15.

## Reversible levers

For switches with swivelling lever, the lever can be fastened on straight or reverse side maintaining the positive coupling.
In this way two different working planes of the lever are possible.

## Head with variable orientation

The head of all switches is adjustable in $90^{\circ}$ steps.

## Operation of contact block 16 with independent contacts

The contact block 16 is provided with two NC contacts, both with positive opening, that can be independently switched depending on the lever turning direction.

## Unidirectional heads

For switches with swivelling lever, the unidirectional operation can be set by removing the four head screws and rotating the internal plunger (except contact block 16)

- ${ }^{(1)}$ Lever VF L35 can only be used in safety applications if adjusted to its max. length, as shown in the figure to the right.

If an adjustable lever is required for safety applications, use the VF L56 adjustable safety lever.
${ }^{-13)}$ If installed with switch FP 58 (e.g. FP 558, FP 658...) the actuator may hit the housing of the switch upon actuation. This possible interference depends on the fixing position of actuator and switch head.

- (4) The actuator cannot be rotated to the inside because it will hit the switch head upon actuation.

Engagement reset
W3 simultaneous reset (standard)
W4 simultaneous reset with increased force

Rollers
standard roller
R5 rubber roller, $\varnothing 40 \mathrm{~mm}$
R26 rubber roller, $\varnothing 50 \mathrm{~mm}$
R27 rubber roller, protruding, $\varnothing 50 \mathrm{~mm}$

## Fixing plates

without plate (standard)
P12 with VF SFP1 plate for FR housing
P32 with VF SFP3 plate for FX housing
Pre-installed cable glands
K23 for cables $\varnothing 6 \ldots 12 \mathrm{~mm}$
K27 for cables $\oslash 3 \ldots 7 \mathrm{~mm}$
Threaded conduit entry
M2 M20x1.5 (standard)
M1 M16x1.5
PG 13.5
A PG 11

## Main features

- Technopolymer housing, from one to two conduit entries
- Protection degree IP67
- Wired versions
- Versions with gold-plated silver contacts

## Quality marks:

| IMQ approval: | EG610 |
| :--- | :--- |
| UL approval: | E131787 |
| CCC approval: | 2021000305000101 |
| EAC approval: | RU C-IT.YT03.B.00035/19 |

## Technical data

## Housing

Housing made of glass fibre reinforced technopolymer, self-extinguishing, shock-proof and with double insulation:
$\square$
FR series, one conduit entry: M20×1.5 (standard)
FX series, two knock-out threaded conduit entries: M20x1.5 (standard)
Protection degree acc. to EN 60529:
IP67 with cable gland of equal or higher protection degree

## General data

Ambient temperature:

Max. operating frequency:
Mechanical endurance:
Mounting position:
Safety parameter $\mathrm{B}_{100}$ :
Mechanical interlock, not coded:
Tightening torques for installation:
Wire cross-sections and
wire stripping lengths:
$-25^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (standard) $-40^{\circ} \mathrm{C} \ldots+80^{\circ} \mathrm{C}$ (T6 option) 3600 operating cycles/hour 20 million operating cycles any
40,000,000 for NC contacts
type 1 acc. to EN ISO 14119
see page 141
see page 153

## In compliance with standards:

IEC 60947-5-1, EN 60947-5-1, EN 60947-1, EN 50047, IEC 60204-1, EN 60204-1,
EN ISO 14119, EN ISO 12100, IEC 60529, EN 60529, EN IEC 63000, EN 81-20, EN 81-50,
UL 508, CSA 22.2 No. 14

## Approvals:

IEC 60947-5-1, UL 508, CSA 22.2 No.14, GB/T14048.5-2017.

## Compliance with the requirements of:

Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.
Positive contact opening in conformity with standards:
IEC 60947-5-1, EN 60947-5-1.

Installation for safety applications:
Use only switches marked with the symbol $\Theta$ next to the product code. Always connect the safety circuit to the NC contacts (normally closed contacts: 11-12, 21-22 or 31-32) as stated in standard EN 81-20 par. 5.11.2.2.1 Actuate the switch at least up to the positive opening travel shown in the travel diagrams on page 142. Actuate the switch at least with the positive opening force, reported in brackets below each article, next to the actuating force value.
$\$$ If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on pages 139 to 146.

[^5]
## Features approved by UL

Electrical Ratings: $\quad$| O 300 pilot duty ( $69 \mathrm{VA}, 125-250 \mathrm{~V} \mathrm{dc}$ ) |
| :--- |
| Environmental Ratings: Types $1,4 \mathrm{X}, 12,13$ |

For all contact blocks use 60 or $75^{\circ} \mathrm{C}$ copper ( Cu ) conductors, rigid
or flexible, wire size $12,14 \mathrm{AWG}$. Tightening torque for terminal
screws of 7.1 lb in ( 0.8 Nm ).
The hub is to be connected to the conduit before the hub is
connected to the enclosure.
Please contact our technical department for the list of approved products.

## Orientation of reset device adjustable

The reset device can turned independently of the above actuator, making positioning of the product incredibly flexible. Extracting the blue button resets the device - as laid down in the standards - to prevent unintentional reset.

## W3 simultaneous reset

Pizzato Elettrica has developed and patented an innovative reset device. This device ensures that, when the switch is activated, the electrical contacts trip and the reset system latches simultaneously. As a result, snap action contact blocks are no longer required, and furthermore, problems resulting from delays between the reset button latching and contacts opening are avoided.

## Compliant with EN 81-20 and EN 81-50

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x.
- Mechanical service life $>10^{6}$ cycles.

## Protection degree IP67

All switches of these series have protection degree IP67.

## Increased actuating force

The switch can be delivered with increased actuating force (option W4). Ideal for vibration applications.

| Actuators | Force |
| :--- | :--- |
| $01,14,15,16$ | 7 N |
| 02,05 | 6 N |
| 07 | 3.5 N |
| $30 \ldots 56$ | 0.08 Nm |

## Cable outlets

Switches available with cable outlets in various directions, for use in the most confined of spaces.

## Reversible levers

For switches with swivelling lever, the lever can be fastened on straight or reverse side maintaining the positive coupling. In this way two different working planes of the lever are possible.

## Adjustable levers

For switches with swivelling lever, the lever can be adjusted in $10^{\circ}$ steps over the entire $360^{\circ}$ range. The positive movement trans-
 mission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft as prescribed for safety applications by the German standard BG-GS-ET-15.

## Adjustable safety lever

The adjustable lever code 56 (and variants) is provided with a notching that prevents the sliding also in case the fastening screw becomes loose.

Fixing plate with large slotted holes for switching point adjustment. Developed for backwards compatibility with previous products.
Each plate is provided with two pairs of mounting holes, one for standard switches and one for switches with reset device. The actuator thus always has the same actuating point.

## Head with variable orientation

The head of all switches is adjustable in $90^{\circ}$ steps.

## Extended temperature range <br> 

These devices are also available in a special version suitable for an ambient operating temperature range from $+80^{\circ} \mathrm{C}$ up to $-40^{\circ} \mathrm{C}$.
They can therefore be used for applications in cold stores, sterilisers, and other equipment operated in very low-temperature environments. The special materials used to produce these versions retain their characteristics even under these conditions, thereby expanding the installation possibilities.

## Position switches with reset device for swivelling lever, without actuator

## IMPORTANT

For safety applications: join only switches and actuators marked with symbol $\Theta$ next to the product code.
For more information about safety applications see details on page 139.

## Special separate actuators

IMPORTANT: These separate actuators can be used only with items of the FR, FX series.
Rubber rollers, $\varnothing 40 \mathrm{~mm}$

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| VF LE31-R5 $\Theta{ }^{(4)}$ | VF LE51-R5 $\oplus^{(4)}$ | VF LE52-R5 $\Theta$ | VF LE54-R5 $\underbrace{(4)}$ | VF LE55-R5 $\Theta^{(1)}$ | VF LE56-R5 $\Theta$ |

Rubber rollers, $\varnothing 50 \mathrm{~mm}$

Protruding rubber rollers, $\varnothing 50 \mathrm{~mm}$

- $^{(1)}$ Lever VF LE55 can only be used in safety applications if adjusted to its max. length, as shown in the figure to the right.
If an adjustable lever is required for safety applications, use the VF LE56 adjustable safety lever.
${ }^{-14}$ The actuator cannot be rotated to the inside because it will hit the switch head upon actuation.

All values in the drawings are in mm Accessories See page 135

## Main features

Safety switches designed specifically for speed limiters requiring high sensitivity, with a low actuating force.
Operation: the switch button is pressed up to the switching point. The button then continues to the limit of travel automatically.

In compliance with standards:
EN 60947-5-1, IEC 60947-5-1, EN IEC 63000, EN 81-20, EN 81-50, UL 508, CSA 22.2 No. 14

Compliance with the requirements of:
Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.
Positive contact opening in conformity with standards:
IEC 60947-5-1, EN 60947-5-1.

## Installation for safety applications:

Use only switches marked with the symbol $\Theta$ next to the product code. Always connect the safety circuit to the NC contacts (normally closed contacts: 11-12, 21-22 or 31-32) as stated in standard EN 81-20 par. 5.11.2.2.1. Actuate the switch at least up to the positive opening travel shown in the travel diagrams on page 142. Actuate the switch at least with the positive opening force, reported in brackets below each article, next to the actuating force value.

亿 If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on pages
139 to 146 .

## Features approved by UL

[^8]
## Introduction

The FT series safety switches with reset retain their switching state when operated: their reset occurs electrically through the integrated solenoid. Thanks to this special feature, the switch can be remotely reset without having to go physically near it. Available with multiple actuators, they are able to adapt to a wide variety of applications, particularly in the area of lifts, speed limiters and, more generally, in the world of security. Some models may also be manually reset.

## Compliant with EN 81-20 and EN 81-50

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x.
- All switches meet requirements laid down by the new standards for safety contacts

## Protection degree IP67

## |P67 All switches of these series have protection degree IP67.

## Adjustable safety lever

The adjustable lever code 56 (and variants) is provided with a notching that prevents the sliding also in case the fastening screw becomes loose.

## Adjustable levers

For switches with swivelling lever, the lever can be adjusted in $10^{\circ}$ steps over the entire $360^{\circ}$ range. The positive movement transmission is always guaranteed thanks to the particular geometrical coupling between the lever and the revolving shaft as prescribed for safety applications by the German standard BG-GS-ET-15.

Versions with adjustment system (housings C, D, E, F)

B

Pizzato Elettrica introduces a new adjustment system, built into the switch, designed specifically for speed limiter applications.
This system allows very fine and sensitive adjustment of the switch position along the vertical axis.

## Features:

- ease of installation and adjustment;
- ability to carry out highly precise vertical adjustment;
- broad adjustment range (up to 4 mm );
- captive elements.

Operation:
A Make a hole in the switch fixing plate, for insertion of the adjustment pin on the back of the switch itself. Insert switch to speed limiter, without obstructing the two fixing screws.
B Adjust the position of the switch, using the screw on the front.
C Finally, secure the switch body to the speed limiter.

## Head with variable orientation

The head of all switches is adjustable in $90^{\circ}$ steps.

## Reversible levers

For switches with swivelling lever, the lever can be fastened on straight or reverse side maintaining the positive coupling. In this way two different working planes of the lever are possible.

## Cable outlets

Switches available with cable outlets in various directions, for use in the most confined of spaces.

Electrical Ratings: Q300 pilot duty ( $69 \mathrm{VA}, 125-250 \mathrm{~V}$ dc) A600 pilot duty ( $720 \mathrm{VA}, 120-600 \mathrm{~V} \mathrm{ac}$ ) Environmental Ratings: Types 1, 4X, 12, 13
For all contact blocks use 60 or $75^{\circ} \mathrm{C}$ copper ( Cu ) conductors, rigid or flexible, wire size 12, 14 AWG. Tightening torque for terminal screws of 7.1 lb in $(0.8 \mathrm{Nm})$.
The hub is to be connected to the conduit before the hub is connected to the enclosure.

Please contact our technical department for the list of approved products.

## Introduction

Standard EN 81-20, paragraph 5.2.1.5, details the requirement for switches to illuminate the lift shaft, close to each access point, and in machinery spaces.
The FR 573 switch has been designed specifically to operate the lights in the lift shaft, and, as a single unit with a single cabling, allows this requirement to be met without having to install light switches and cabling separately on each floor.

## Installation:

The installation is extremely simple: the switch is fixed in the upper part of the lift shaft and it is operated by means of a rope that runs through the entire shaft.
The relevant indicators of the rope's function - placed at regular intervals on each floor - also act as convenient handles. In this way, an operator on the cabin roof, or at any position throughout the lift shaft, is able to actuate the switch by simply pulling the practical indicator device, or the rope itself.
A special function indicator with weights is installed at the end of the rope, in order to keep it taut.
The maximum recommended rope length is 50 metres. For longer lengths, please contact our sales office.

## Operation:

The FR 573 switch retains its position after actuation. This means that the first actuation closes the contacts, the next actuation opens them, and so on.
To switch on the light in the lift shaft it is sufficient to pull the rope. To switch the light off, simply pull the rope again.

For all contact blocks use 60 or $75^{\circ} \mathrm{C}$ copper ( Cu ) conductors, rigid or flexible, wire size 12, 14 AWG. Tightening torque for terminal screws of 7.1 lb in ( 0.8 Nm ).
The hub is to be connected to the conduit before the hub is connected to the enclosure.

Please contact our technical department for the list of approved products.

| Three wiring options |

Standard wiring With bipolar cable throug the centre hole, on the bottom of the housing. It is also possible to use a tripolar cable, with the ground wire exiting via a lateral hole to earth other metallic parts.

Fast bottom wiring

Fast lateral wiring With two monopolar cables fed through two holes provided on the side of the housing. There is no need to open the contact cover during this procedure.

## Transparent head and slotted holes

Head transparent on all sides, to allow adjustment and centring of the actuator in relation to contacts.

The slotted holes on the actuator and in the contact housing allow for correct alignment of both devices.

## Rotating head

Turning the head and contact springs by $180^{\circ}$, a door contact with rear actuation can be converted to front actuation. Simply by loosening three screws.

## Rear fixing of the housing

The special housing shape allows rear fixing.
You also have the option of inserting a tubular wrench close to the mounting holes, to hold the nut in place during fixing.

## Compliance with the requirements of:

Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.
Positive contact opening in conformity with standards:
IEC 60947-5-1, EN 60947-5-1.

## Installation for safety applications:

Use only switches marked with the symbol $\Theta$ next to the product code. Always connect the safety circuit to the NC contacts (normally closed contacts: 11-12, 21-22 or 31-32) as stated in standard EN 81-20 par. 5.11.2.2.1. Actuate the switch at least up to the positive opening travel reported in the travel diagrams. Actuate the switch at least with the positive opening force, reported in brackets below each article, next to the actuating force value.

乌 If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on pages 139 to 146.

## Compliant with EN 81-20 and EN 81-50

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x.
- Mechanical service life > $10^{6}$ cycles.

## Separate actuator

## Adjustable actuator

The actuator can be fixed in two positions, perpendicular to one another. The switch can also be actuated from different directions.

## Head with variable orientation

The head of all switches is adjustable in $90^{\circ}$ steps.

## Main features

- Technopolymer housing
- Protection degree IP20, IP40 or IP65
- 4 terminal types available
- Versions with positive opening $\Theta$
- Versions with gold-plated silver contacts
- Terminal covers with strain relief cable gland

## Contact reliability

Thanks to the double and redundant execution, the electrical contact of the microswitch has been designed with a technology providing increased reliability. For high-volume part orders, the microswitch can be also supplied with the NO or NC contact only, in order to reduce the costs.

## Microswitches for safety applications

All microswitches showing the symbol $\Theta$ besides the product code are with positive opening and therefore suitable for safety applications. These microswitches are provided with a rigid connection between the plunger and the NC contacts, which are forcibly actuated by a internal sturdy safety lever.
The positive opening has been designed in compliance with the standard EN 60947-5-1, Annex K. Therefore, these microswitches are suitable for safety applications.

## Versions with protection degree IP65

IP65
Inside the housing of the microswitch it is possible to insert gaskets to protect the mechanism against fine dusts or liquids up to the protection degree IP65.
To achieve a protection degree of IP65, please order the IP65-compatible version of the microswitch, with the IP65 terminal cover version.

## Clamping screw plates for cables of different diameters (MK V.)

The clamping screw plates are provided with a particular "roofing tile" structure and are loosely coupled to the clamping screw. The design causes connection wires of different diameter to be pulled towards the screw when tightening the screw (see figure), preventing the wires from escaping towards the outside.

Compliant with EN 81-20 and EN 81-50

- Safety contacts in compliance with EN 60947-5-1, annex K.
- Protection degree higher than IP4x.
- Mechanical service life $>10^{6}$ cycles.

Stackable terminal covers with cable gland

The terminal covers are provided with strain relief cable gland and protection degree up to IP65. These are snap-on terminal covers and have reduced dimensions contained in the profile of the microswitch so that these can be installed on microswitches fixed side by side as well. See page 70 .

## Terminal dimensions

Faston terminals $\mathbf{H}$, vertical

Screw terminals $\mathbf{V}$ with plate

Faston terminals $\mathbf{F}$, right angle

Faston terminals G, left angle (on request)

Note: The vertical faston terminals H can be bent according to specific installation requirements.
We recommend to bend the faston with an angle not higher than $45^{\circ}$ and to carry out this operation no more than 5 times.

| VF MKCH23 | Protective terminal cover with gasket for multipolar cables $\varnothing 2 \ldots 5.5 \mathrm{~mm}$ | IP65 |

## Accessories

Packs of $\mathbf{1 0} \mathbf{p c s}$.

## Station holder

The EL AC control stations can also be wallmounted, using the dedicated VE SF series control station holder. This accessory is suitable for use in all situations where it is useful to be able to insert the station in a fixed and secure holder, when not in use by the operator. The reinforced structure and fitted design of the holder ensure easy insertion of the control station, secure hold, and sturdy protection.
The snap-in attachment, felt when the station is fully inserted, provides feedback to the operator that the control station is held firmly in place, preventing poor positioning of the device that could allow it to slip from its retainer.

## Introduction

The experience and knowledge acquired in decades of activity in the field of safety and automation enables Pizzato Elettrica to offer innovative solutions in other areas as well, combining maximum functionality and flexibility of use with clear lines and attention to detail.
The EL AC series lift control stations are designed for motion control of elevators during inspection and maintenance. The control stations are equipped with Pizzato Elettrica EROUND signalling and control devices.

## In compliance with standards EN 81-20 and EN 81-50

International standards EN 81-20 and EN 81-50 set new, updated, technical and safety requirements in comparison to current standards. They are a significant development in terms of lift construction and installation. The EL range of signalling and control stations is designed to meet all of the requirements included in these standards, to ensure that products are fully compliant.

Modularity

The number, type and location of holes made in the control stations to accommodate devices can be freely selected by the customer: The number of possible variants is very high.
This wide range of options is made possible by an innovative mould, made up of modular and interchangeable elements (patent pending). It allows free positioning of the various hole patterns and shapes required to accommodate devices. This modular mould allows the entire cover to be produced as a single piece in a single casting process.

## Robustness

The protection of devices against impacts or kicks is guaranteed by both the laterally-hinged guard (in versions equipped with this feature), and by the use of recessed buttons, which do not protrude from the surface of the control station.
In addition, the use of robust guards for particularly bulky control switches, such as emergency stop buttons or selector switches, makes the product applicable in the toughest environments.

## Changeover switches and selector switches

In the EL AC series control stations, a changeover switch can be installed instead of a selector on request. The cam switches have a wide, ergonomic actuation knob, are available in versions with 2 or 3 stable positions, and can be internally wired to customer specifications, up to a maximum of 8 contacts.
The cover shapes designed to accommodate the switches provide a suitable enclosure with protection guard.
Equipped with a gasket below the knob, the switch achieves a protection degree of IP67.

## Treadproof

The hinged lateral protective cover has a dual function: it protects devices from dust and dirt, and also from impacts or loads (up to a maximum of 100 kg ).
Its special shape means that it is still easy to actuate the emergency stop button, while at the same time the protective function remains in place, even in the event of a distracted maintenance engineer
 accidentally treading on the control station.
The installed devices will remain unaffected, thanks to the shape of the protection, which allows the pressure exerted to be dispersed onto the robust structure of the control station.

## Custom wiring

The control stations can be supplied wired, with the wiring implemented according to customer specifications; both in terms of cables used, and connectors.
This additional adaptation to customer requirements means that the control stations are supplied ready for final installation.

## Aesthetics

The shape of the lower part of the control station merges seamlessly with that of the protection; thus forming a single body, characterised by the absence of any protruding elements. This allows the station to be used even when an attractive design is required, which is increasingly the case when the lift shaft is framed in glass and the
 cabin is thus visible.

Magnetic bases

All EL AC series control stations can be supplied with a magnetic base, installed at the bottom of the housing; this allows the control stations to be anchored to walls and metallic surfaces, in such a way that they are removable, and no drilling is required. The adhesive magnetic bases can also be retrofitted.

## Electrical socket

The interior parts of the socket are protected against accidental contact by a removable cover.
It is available in various versions to comply with different country-specific regulations.

## Protective cover available separately

In the control station versions with centrally positioned emergency stop button, with no protruding guards, the laterally hinged protective cover can be retrofitted, as it is available separately to the control station.

## Two heights

The Pizzato Elettrica EL AC series control stations are available in both a high base version (2 levels of contacts) and a low base version (1 level of contacts). This significantly increases the number of application possibilities for the product itself.

## LASER engraving

Pizzato Elettrica has introduced a new LASER engraving system for EL AC series control stations. Thanks to this new system, which does not use pad printing or labels, engravings on the products are indelible and durable over time.
The laser engravings of the EL AC series control stations now include pictograms and icons compliant with the EN 81-20 standard; the control stations can also be customised using indicators, symbols, and logos, on customer request.

## Cover without base

The EL AC control stations are also available as as covers without base. These are designed for cases where the control station is to be mounted directly on a wall or in switching cabinet.

## Selection diagram

## Code structure

Attention! The feasibility of a code number does not mean the effective availability of a product. Please contact our sales office.

Changeover switches and selector switches

In the EL AN series control stations, a cam switch can be installed instead of a selector switch on request.
The cam switches have a wide, ergonomic actuation knob, are available in versions with 2 or 3 stable positions, and can be internally wired to customer specifications, up to a maximum of 4 contacts.
The cover shapes designed to accommodate the switches provide a suitable enclosure with protection guard.
Equipped with a gasket below the knob, the switch achieves a protection degree of IP67.

## Introduction

The experience and knowledge acquired in decades of activity in the field of safety and automation enables Pizzato Elettrica to offer innovative solutions in other areas as well, combining maximum functionality and flexibility of use with clear lines and attention to detail.
The EL AN series control stations are equipped with Pizzato Elettrica EROUND signalling and control devices.
The EL AN series lift control stations are designed for motion control of elevators during inspection and maintenance.

## In compliance with standards EN 81-20 and EN 81-50

International standards EN 81-20 and EN 81-50 set new, updated, technical and safety requirements in comparison to current standards. They are a significant development in terms of lift construction and installation. The EL range of signalling and control stations is designed to meet all of the requirements included in these standards, to ensure that products are fully compliant.

## Modularity

The number, type and location of holes made in the control stations to accommodate devices can be freely selected by the customer: The number of possible variants is very high.
This wide range of options is made possible by an innovative mould, made up of modular and interchangeable elements (patent pending). It allows free positioning of the various hole patterns and shapes required to accommodate devices. This modular mould allows the entire cover to be produced as a single solid piece in a single casting process.

## Wide range

The range of available EL AN series control stations includes 4 different dimensions, and multiple configurations.
The shape of the new EL AN control stations has been designed with particular attention to detail; creating a pleasing aesthetic result.

## Treadproof

The EL AN series of control stations - thanks to their specific design, and the choice of materials used - are particularly resistant, and able to withstand impacts and loads.
They are therefore suitable for use in heavy-duty applications.

## Custom wiring

The control stations can be supplied wired, with the wiring implemented according to customer specifications; both in terms of cables used, and connectors.
This additional adaptation to customer requirements means that the control stations are supplied ready for final installation.

## Electrical socket

The interior parts of the socket are protected against accidental contact by a removable cover.
A separator plate is available (which can be installed in various positions), which is used to separate control station parts with different voltages.
The electrical socket is also always installed on the top of the control station, and never on its side; this makes it easier to use, and its position easier to see. It is available in various versions to comply with different country-specific regulations.

Magnetic bases

## Padlockable protection for bypass device

Paragraph 5.12.1.8 of UN i.e. EN 81-20:2014 stipulates use of a bypass device, to allow maintenance of the contacts of landing and cabin doors, and of door locking devices. This device must be placed in the control or emergency panel, and must be a switch protected against unintended use through the use of mechanically mobile means.
The Pizzato bypass device provides a solid guard with a movable cover, which, if needed, can be locked in a closed position by inserting one or two padlocks, or
 sealed.
To facilitate operations, the cover also has two shutter-release positions: fully open and fully closed.
The cover therefore will not open inadvertently, but it must in any case be manually disconnected.
The lockable Pizzato guard can be installed on EL series control stations or on any electrical panel that has the appropriate holes for the fixing screws, as shown.

## Conduit entries

The base of the EL AN control station has several knock-out entries for cable routing. This ensures easy wiring.
The control stations have four entries at the sides, and 2 entries on the bottom.

LASER engraving

Pizzato Elettrica has introduced a new LASER engraving system for EL AN series control stations.
Thanks to this new system, which does not use pad printing or labels, engravings on the products are indelible and durable over time.
The laser engravings of the EL AN series control stations now include pictograms and icons compliant with the EN 81-20 standard; the control stations can also be customised using indicators, symbols, and logos, on customer request.

## Visual and audible signals

All devices required for compliance with the provisions of standard EN 81-20, in terms of visual and audible signals inside the lift shaft, are available.
All EL series control and signalling stations can therefore be equipped with white lights, with an intensity of 5 LUX at a distance of 1 metre;
 flashing yellow lights, and buzzers with continuous or pulsed tone, with a minimum sound intensity of 55 dB at a distance of 1 metre.

## High-reliability self-cleaning contacts

"V-shape" self-cleaning contacts with quadruple contact point. This type of shape, thanks to the presence of the double contact point, makes it possible to drastically reduce the probability of contact commutation failure. In addition to this, it improves considerably the reliability in the presence of dust (patent pending).

## Positive opening

NC contact block suitable for safety applications, with positive opening contacts in accordance with IEC 60947-5-1.

## Features approved by UL

Electrical Ratings: A600 pilot duty ( $720 \mathrm{VA}, 120-600 \mathrm{~V} \mathrm{ac}$ ) Q300 pilot duty ( $69 \mathrm{VA}, 125-250 \mathrm{~V}$ dc)
For contact block series E2 C provided with clamping screw terminals: use 60 or $75^{\circ} \mathrm{C}$ copper (Cu) conductor and wire size range 14-20 AWG, stranded or solid. The terminal tightening torque of $7.1 \mathrm{Lb} \ln (0.8 \mathrm{Nm})$.
For contact block series E2 C provided with screw less type terminals: use 60 or $75^{\circ} \mathrm{C}$ copper ( Cu ) conductor and wire size range 16-24 AWG, stranded. These terminals are suitable also for stranded conductors prepared with ZMLF ferrules. also for stranded conductors prepared
Recommended stripping length: 8 mm .

## Features approved by IMO

Rated insulation voltage ( $U_{i}$ ): 500 V Conventional free air thermal current $\left(I_{\text {th }}\right): 10 \mathrm{~A}$ Thermal current inside housing ( $\left(t_{\text {the }}\right): 10 \mathrm{~A}$ Rated impulse withstand voltage ( $\mathrm{U}_{\mathrm{imp}}$ ): 8 kV Protection degree of the housing: IP20 Terminals: screw terminals Utilization category: AC15

Operating voltage ( $\mathrm{U}_{\mathrm{e}}$ ): $400 \mathrm{Vac}(50 / 60 \mathrm{~Hz})$ Operating current $\left(l_{\mathrm{e}}\right)_{\mathrm{e}}: 3 \mathrm{~A}$
Forms of the contact element: $\mathrm{X}, \mathrm{Y}$
Positive opening of contacts on contact blocks 01G, 01K
In compliance with standards: EN 60947-1,
EN 60947-5-1, fundamental requirements of the Low Voltage Directive 2014/35/EU.

Robustness

The protection of devices against impacts or kicks is guaranteed by both the solid structure of the station which is made from robust, extra thick materials - and by the use of buttons which are integrated and therefore do not protrude from the surface. In addition, the use of robust guards for particularly bulky control switches, such as emergency stop buttons or selector switches, makes the product applicable in the toughest environments.
In the 60 mm reduced height version, two solid guards have also been incorporated, designed to protect the two devices mounted on the top.

## Introduction

The experience and knowledge acquired in decades of activity in the field of safety and automation enables Pizzato Elettrica to offer innovative solutions in other areas as well, combining maximum functionality and flexibility of use with clear lines and attention to detail.
The EL AD series control stations are equipped with Pizzato Elettrica EROUND signalling and control devices.
The EL AD series lift control stations are designed for motion control of elevators during inspection and maintenance.

## In compliance with standards EN 81-20 and EN 81-50

International standards EN 81-20 and EN 81-50 set new, updated, technical and safety requirements in comparison to current standards. They are a significant development in terms of lift construction and installation.
The EL range of control stations is designed to meet all of the requirements included in these standards, to ensure that products are fully compliant.

## Reduced height

Continuous optimisation of the space available in the lift shaft has led to the need for control stations with reduced height.
Pizzato meets these requirements by offering the innovative vertical variant of the new EL AD series housing: with a maximum overall height of 60 mm , contact blocks of standard height can be used, as well as recessed devices, including sockets, emergency stop buttons and generously dimensioned selector switches with robust protective guards.

The number, type and location of holes made in the control stations to accommodate devices can be freely selected by the customer: The number of possible variants is very high.
This wide range of options is made possible by an innovative mould, made up of modular and interchangeable elements (patent pending). It allows free positioning of the various hole patterns and shapes required to accommodate devices. This modular mould allows the entire cover to be produced as a single solid piece in a single casting process.

## Ease of wiring

The design of the product offers many technical and practical advantages, the first of which is the ease of cabling: in addition to the four entries for cables on the base,
 there are up to six entries on the cover.
Having the entries directly on the cover means having everything positioned on the same side of the station, thus simplifying and speeding up the cabling and closing of the control station.

## Custom wiring

The control stations can be supplied wired, with the wiring implemented according to customer specifications; both in terms of cables used, and connectors.
This additional adaptation to customer requirements means that the control stations are supplied ready for final installation.

## Rear fixing of the cover

The cover fixing screws on the base are positioned obscured from view, behind the station; this in turn means that the station can only be opened once removed from the wall where it is fixed making tampering more difficult.

## Electrical socket

The interior parts of the socket are protected against accidental contact by a removable cover.
It is available in various versions to comply with different country-specific regulations.

Changeover switches and selector switches

In the EL AD series control stations, a cam switch can be installed instead of a selector switch on request.
The cam switches have a wide, ergonomic actuation knob, are available in versions with 2 or 3 stable positions, and can be internally wired to customer specifications, up to a maximum of 6 contacts.
The cover shapes designed to accommodate the switches provide a suitable enclosure with protection guard.
Equipped with a gasket below the knob, the switch achieves a protection degree of IP67.

## Fixing hook

The specific shape of the reduced height 60 mm station also allows a practical fixing hook, positioned between the two devices mounted on the top, to be incorporated. With this robust hook, the control station can easily be hung on the wall.

## Profiled base

The station base is also knurled, allowing easier grip when picking up and handling the station.

## LASER engraving

Pizzato Elettrica has introduced a new LASER engraving system for EL AD series control stations.
Thanks to this new system, which does not use pad printing or labels, engravings on the products are indelible and durable over time.
The laser engravings of the EL AD series control stations now include pictograms and icons compliant with the EN 81-20 standard; the control stations can also be customised using indicators, symbols, and logos, on customer request.

## Magnetic fixing bases

All EL AD series control stations can be supplied with a magnetic base, installed at the bottom of the housing; this allows the control stations to be anchored to walls and metallic surfaces, in such a way that they are removable, and no drilling is required. The adhesive magnetic bases can also be retrofitted.

## Selection diagram

EL AD23010

## \ Installation for safety applications:

Use only contact blocks marked with the symbol $\Theta$. Always connect the safety circuit to the NC contacts (normally closed contacts: 1-2) as stated in standard EN 81-20 par. 5.11.2.2.1.

Compliance with the requirements of:
Low Voltage Directive 2014/35/EU, EMC Directive 2014/30/EU,
Lift Directive 2014/33/EU, RoHS Directive 2011/65/EU.
Positive contact opening in conformity with standards:
IEC 60947-5-1, EN 60947-5-1.
\ If not expressly indicated in this chapter, for correct installation and utilization of all articles see the instructions given on page 119.

## General requirements

All electrical components and devices of the EROUND series that are to be installed inside switching cabinets or enclosures (e.g. E2 CP, E2 CF, E2 LP, E2 LF), are not provided with suitable protections against: water, high quantities of dust, condensation, humidity, steam, corrosive agents, explosive gases, flammable gases or other polluting agents. The protection degree of switching cabinets or enclosures shall ensure the necessary protection to the electrical components of the EROUND series inside them, depending on the application area.

## Reference dowel

The mounting reference dowel on the external diameter of all EROUND line devices enables perfect device alignment and mounting on the panel, while avoiding rotations.
In case of use on holes without reference notches, simply remove the dowel with a slight leverage effect using a screwdriver, making sure that the seal gasket does not get damaged.
The removal of the reference dowel, is not advisable for the selectors (series E2 •SE, E2 •SL, E2 •SC) and emergency stop buttons (series E2 $\bullet$ PE) with rotary release, as these devices are subject to rotarytype actuation.

## Connection to mounting adapter

After its installation on the panel using the special ring, the control device can be fixed to the mounting adapter by turning the locking lever. The lever reports the free position (lock open) and locked position (lock closed) indications.
The locking lever rotation can be made smoother by using a flat-head screwdriver.

## Seal gasket

Thanks to its design, the seal gasket ensures a pre-fixing on the panel. This allows to mount the ring without having to hold the device in position.

## Mounting of contact blocks and LED units

Contact blocks and LED units are provided with two snap-in mounting flaps that ensure a stable fixing between them and the mounting adapter (in the panel mounting version), or between them and the base of the housing (in the base mounting version). The panel contact blocks can be connected to each other, up to three, in observance of the limits specified for each actuator in the respective chapter.
Contact blocks and LED units can be quickly disassembled by using a flat-head screwdriver to leverage on the connection flaps.

Release of the contact block from the base

Release of the contact block from another unit

## Panel fixing

The control and signalling devices have to be fixed on the rear of the panel with a fixing ring. This has to be tightened with the special fixing key which is supplied as an accessory.
The tightening torque for a correct fixing must be between 2.0 and 2.5 Nm .

Once the fixing ring has been tightened, the mounting adapter and then the contact blocks or LED units can be mounted on the panel.

## Lenses for E2 indicator lights

The E2 indicator lights are provided with interchangeable lenses in different colours. The lenses can be removed and mounted by simply turning them clockwise and anticlockwise respectively, without using tools.
For a correct colour rendering, it is necessary to use the correct combination between colour of the indicator light lens and colour of the LED unit applied to it.

## Lenses for buttons and illuminated buttons

The buttons and the illuminated buttons feature replaceable lenses. To remove the lenses, leverage them with a pointed object near the reference notch on the external diameter of the lens itself.

## Using the devices

- All devices of the EROUND series are hand operated.
- Do not apply excessive force to the device once it has reached the end of its actuation travel.
- Do not exceed the maximum actuation travel.
- Before installation, make sure the device is not damaged in any part.
- Do not disassemble or try to repair the device, in case of defect or fault replace the entire device.
- In case the device is deformed or damaged it must be entirely replaced. Correct operation cannot be guaranteed if the device is deformed or damaged.
- Always attach the device operating instructions (if present) to the manual of the machine in which the device is installed.
- These operating instructions must be kept available for consultation at any time and for the whole period of use of the device.

## Shock and vibrations

Avoid collisions with the devices. Excessive shock and vibrations may affect correct operation of the device

## Wiring and installation

- Installation must be carried out by qualified staff only.
- Observe minimum distances between devices.
- Observe the tightening torques.
- Keep the electrical load below the value specified by the utilization category.
- Disconnect the power before to work on the contacts, also during the wiring.
- Do not paint or varnish the devices.
- Devices can only be installed on perforated surfaces with a thickness of between 1 mm and 6 mm that comply with the IEC 60947-5-1 standard.
- The protection degree and the correct operation are only guaranteed if the product is installed on a level and smooth surface and if the diameter of the holes is compliant with the IEC 60947-5-1 standard.
- After and during the installation do not pull the electrical cables connected to the contact blocks. If excessive tension is applied to the electrical cables, the contact blocks could detach from the actuator.
- During the coupling and uncoupling of the contact blocks from the mounting adapter or from the base, do not deform or put excessive stress on the coupling flaps. A possible deformation of the flaps could cause the detachment of the contact blocks from their mounting adapter.
- The housings in the EL AC, EL AN, EL AD series are fitted with knock-out holes for the passage of electrical cables. Open these holes using a suitable tool to avoid damaging the housing. Refrain from using housings damaged or cracked as a result of erroneous manoeuvres performed when opening the knock-out holes. After opening the hole, remove any plastic residues and insert a cable gland (or similar device) into the hole with a degree of protection equal or superior to that of the housing.
- After installation and before commissioning of the machine, verify:
- the correct operation of the device;
- the correct and full locking of the E2 1BAC•• mounting adapter to the device;
- the correct coupling of the contact blocks.
- Periodically check for correct device operation.
- Do not deform or modify the device for any reason.
- Before installation, make sure the device is not damaged in any part.
- Refrain from opening, disassembling or attempting to repair the device and replace it immediately if it appears to be damaged.
- Should the installer be unable to fully understand the utilization requirements, the product must not be installed and the necessary assistance may be requested.

## Do not use in following environments:

- Environments where dust and dirt can cover the device and by sedimentation stop its correct working.
- Environment where sudden temperature changes cause condensation.
- Environments where coatings of ice may form on the device.
- Environments where the application causes knocks or vibrations that could damage the device.
- Environment with presence of explosive or flammable gas or dust.
- In environments containing strongly aggressive chemicals, where the products used coming into contact with the device may impair its physical or functional integrity.

## Limits of use

- Use the devices following the instructions, complying with their operation limits and the standards in force.
- The devices have specific application limits (min. and max. ambient temperature, mechanical endurance, protection degree, utilisation category, etc.) These limits are met by the different devices only if considered individually and not if combined with each other. For further information contact our technical department.
- The utilization implies knowledge of and compliance with following standards: EN 60204-1, EN 60947-5-1, ISO 12100, EN ISO 14119.
- Please contact our technical department for information and assistance (phone +39.0424.470.930 / e-mail tech@pizzato.com) in the following cases:
- Cases not mentioned in the present utilization requirements.
- In nuclear power stations, trains, airplanes, cars, incinerators, medical devices or any application where the safety of two or more persons depend on the correct operation of the device.

## Additional requirements for safety applications

Provided that all previous requirements for the devices are fulfilled, for installations with operator protection function additional requirements must be observed.

- The utilization implies knowledge of and compliance with following standards: IEC 60204-1, IEC 60947-5-1, EN ISO 13849-1, EN 62061, EN ISO 12100.
- For emergency stop buttons the safety circuit must be connected to the .1-. 2 NC contacts with the actuator in rest position. The auxiliary contacts NO .3-. 4 must be used in signalling circuits only.
- The protection fuse (or equivalent device) must be always connected in series with the NC .1-. 2 contacts of the safety circuit.
- Periodically verify the correct working of the safety devices; the periodicity of this verification is settled by the machine manufacturer based on the machine danger degree and it does not have to be less than one a year.
- After installation and before commissioning of the machine, verify: - the correct operation of the device;
- the correct and full locking of the E2 1BAC•• mounting adapter; - the correct coupling of the contact blocks.
- For the E2 •PEBZ•••• emergency stop buttons with key release do not leave the key inserted. A possible sudden activation of the emergency stop button with the key inserted could cause injuries to the operator.
- All the safety devices installed on the machine (e.g. emergency stop button, stop button, automatic/manual mode selector etc.) have a limited endurance. Although still functioning, after 20 years from the date of manufacture the device must be replaced completely. The date of manufacture is placed next to the product code, on the label attached to the packing. In case of particularly adverse weather conditions, the endurance of the device can be drastically reduced over time. Regularly check that the safety devices are working properly and if required, replace them, even prior to the above-mentioned expiry date.
- The device is provided with external marking on its packaging. The marking includes: Producer trademark, product code, batch number and date of manufacture. The batch's first letter refers to the month of manufacture ( $\mathrm{A}=$ January, $\mathrm{B}=$ February, etc.). The second and third letters refer to the year of manufacture (19 = $2019,20=2020$, etc.).
- If the device is used for safety applications, inadequate installation or tampering can cause people serious injuries and even death.
- These devices must not be bypassed, removed, turned or disabled in any other way.
- If the machine where the device is installed is used for a purpose other than that specified by the producer, the device may not pro-
vide the operator with efficient protection.
- The safety category of the system comprising the safety device also depends on external devices and their connection. Check that the device is capable of performing the safety function envisaged by the risk analysis of the machine, as provided by EN ISO 13849-1.

## Introduction

Based on the decades of experience of Pizzato Elettrica in the field of industrial safety and automation, the CS AR series of safety modules for lifts has been developed.
All CS series safety modules are implemented with cutting edge technology, and attention to detail.
They are produced on the premises of Pizzato Elettrica, at Marostica (in Italy), using special SMT (surface mount technology) assembly lines that are able to operate with lead-free technology. This meets eco-compatibility requirements laid down by the RAEE and RoHS Directives.

## Maximum safety level

The safety modules of the CS series are equipped with redundant electronics. They enable the construction of circuits with the highest safety levels: PL e according to EN ISO 13849-1 and SIL 3 according to EN 62061.

## Mounting on DIN rails

The housings of all CS series safety modules are suitable for DIN rail mounting and are compact ( 22.5 or 45 mm wide) to minimize the overall dimensions inside the control cabinets.

## Fast wiring with removable connectors

The CS series safety modules can be ordered as versions with screw terminals, or with removable connectors and screw or spring terminals.
The versions with removable connectors are faster and easier to wire and install.
Furthermore, should a damaged module require replacement, machine downtimes are significantly reduced.

Final inspection of $100 \%$ of all products

To provide the user with a guarantee of the high quality standards of Pizzato Elettrica products, each safety module is tested individually using automated test stations, and identified by a unique serial number.
This process allows preventive identification of products displaying production defects, or deviations from standard operating parameters.

## Technical assistance

The technical department of Pizzato Elettrica supports installers of CS series safety modules with useful information before, during, and after the installation phase, in the most complex applications.

## Compliant with EN 81-20 standard

EN 81-20
The CS series of safety modules for lifts has been subjected to testing carried out by notified bodies, which have confirmed compliance with technical standard EN 81-20 on the construction and installation of lifts for the transport of persons and goods.
These devices can therefore be used for implementation of the following safety functions:

- levelling and re-levelling with doors open, in accordance with 5.12.1.4 of EN 81-20;
- detection of uncontrolled movements of the car and control of a device that stops and holds the car in accordance with 5.6.7.7 of EN 81-20, with a response time of 15 ms ;
- monitoring of correct operation and release of the motor brake in accordance with 5.6.7.3 of EN 81-20;
- detection of uncontrolled movements of the car during levelling operations with doors open and control of a device that stops and holds the car in accordance with 5.6.7.7 of EN 81-20, with a response time equal to 15 ms .

## Quality marks

All Pizzato Elettrica safety modules bear quality marks that confirm their fulfilment of safety requirements and compliance with product directives in force in international markets.
Within the European Union, the CE marking is issued in accordance with the most recent version of the 2014/33/EU lift directive.

## EC type-examination certificate

The EC-type examination certificate is issued by a Notified Body, and guarantees compliance with the safety requirements of the Machinery Directive and lift directive. The ECtype examination certificate guarantees to the customer, that experts of a Notified Body have verified compliance with directives and continuously monitor the production process and check the conformity of products with the sample (type) verified during approval. A product that is awarded EC-type certification can be marketed with the CE symbol, followed by a four-digit number identifying the Notified Body.

Safety module CS AR-91

Pin assignment

Voltage dips, short interruptions and voltage variations

The CS AR-91 safety module has a builtin voltage drop sensor which serves to protect and safeguard the internal state of the safety relays, in the event of dips or short voltage interruptions. This is to prevent unwanted switching states in relation to the state of the inputs from occurring. When voltage is restored the device continues to operate with a the device con with a switching state that is consistent with the input signals. The safety module retains its normal function during voltage dips and brief interruptions; for longer voltage interruptions, the safety outputs open and reset themselves automatically during an automatic start if voltage is restored or in the case of a manual or monitored start - require that the system be reset by the operator.

## Internal block diagram

$\mathbf{t}_{\text {MIN }}$ : Min. duration of start impulse
. simultaneity time
$\mathbf{t}_{\mathbf{A}}$ : response time
$\mathbf{t}_{\mathrm{R} 1}, \mathbf{t}_{\mathrm{R} 2}$ : release time
$t_{R}$ : release time in absence of

## Notes

The configurations with one channel are obtained taking into consideration the S11/ S12 input only. In this case it is necessary to consider time $\mathbf{t}_{\mathrm{k} 1}$ referred to input S11/ S12, time $\mathbf{t}_{\mathbf{R}}$ referred to the supply, time $\mathbf{t}_{\mathbf{A}}$ referred to input $\mathrm{S} 11 / \mathrm{S} 12$ and to the start, and time $\mathbf{t}_{\text {MIN }}$ referred to the start.

## Automatic start

With regard to the indicated diagrams bridge the start button between S33 and S34 in order to activate the automatic start module.

## Monitored start

With regard to the indicated diagrams, remove the connection between the S22 and S35 terminals in order to activate the monitored start module.

## Electromechanical switches

The safety module can control both magnetic sensors and electromechanical switches. Replace the sensor contacts with switch contacts.

Notes:

- Use 60 or $75^{\circ} \mathrm{C}$ copper ( Cu ) conductor and wire size No. 30-12 AWG, stranded or solid.
-The terminal tightening torque of $5-7 \mathrm{lb}$ in.
Only for $24 \mathrm{Vac} / \mathrm{dc}$ versions: supply from remote Class 2 source or limited voltage limited energy.

CS AR-94 safety module

Pin assignment

Voltage dips, short interruptions and voltage variations

The CS AR-94 safety module has a builtin voltage drop sensor which serves to protect and safeguard the internal state of the safety relays, in the event of dips or short voltage interruptions. This is to prevent unwanted switching states in relation to the state of the inputs from occurring. When voltage is restored, the device continues to operate with a switching state that is consistent with the input signals. The safety module retains input signals. The safety module retains
its normal function during voltage dips and brief interruptions; for longer voltage interruptions, the safety outputs open and reset themselves automatically during an automatic start if voltage is restored or in the case of a manual or monitored start - require that the system be reset by the operator.

| VF ADM20-1/2NPT | Adapter from M20 x 1.5 to 1/2 NPT | $\mathrm{M} 20 \times 1.5$ | 1/2 NPT | 9 | 14 | 24 |

Thread adapters make it possible to fulfil requests for switches with a different thread to those generally found in stock. This means it is possible to offer customers a single product type with various threaded connections, while only having to stock the product itself and many kinds of adapters.

## LED signalling lights

Packs of $\mathbf{5}$ pcs.

These signalling lights with high luminosity LEDs are used for signalling that an electric contact has changed its state inside the switch. They can be installed on switches of the FL, FX, FZ, FW, FG, NG or FS series by screwing them on one of the conduit entries not used for electric cables. They can be used for many different purposes: for example, to signal, from a distance, whether the switch has been actuated; whether the guard has closed correctly; or whether the guard is locked or unlocked.
The inner part can rotate in such a way that it can be wired and screwed on the switch without any risk of twisting the wires.

## Installation of single switches with safety functions

- Use only switches with the symbol $\Theta$ (see figure on the side).
- Connect the safety circuit to the NC normally closed contacts (11-12, 21-22 or 31-32).
- The NO normally open contacts (13-14, 23-24, 33-34) should be used only for signalling; these contacts are not to be connected with the safety circuit. However, if two or more switches are used on the same guard, a connection can be established between the NO contacts and the safety circuit.
In this case at least one of the two switches must have positive opening and a normally closed contact NC (11-12,
21-22 or 31-32) must be connected to the safety circuit.
- Actuate the switch at least up to the positive opening travel shown in the travel diagrams with symbol $\Theta$.
- The actuation system must be able to exert a force that is greater than the positive opening force, as specified in brackets below each article, next to the minimum force value.
- The device must be affixed in compliance with EN ISO 14119.

Whenever the machine guard is opened and during the whole opening travel, the switch must be pressed directly (fig. 1) or through a rigid connection (fig. 2).
Only in this way the positive opening of the normally closed NC contacts (11-12, 21-22, 31-32) is guaranteed.

In safety applications with only one switch for each guard, the switches must never be activated by a release (fig. 3 and 4) or through a non rigid connection (i.e. by a spring).

Fig. 4

## Mechanical stop

Acc. to EN ISO 14119 paragraph 5.2 letter h) "the position sensors must not be used as mechanical stop".

The actuator must not exceed the max. travel as indicated in the travel diagrams.

The guard must not use the switch head as a mechanical stop.

The actuator must not strike directly against the switch head.

## Actuation modes

| Recommended application | Application to avoid This application is possible, but increased mechanical stress may shorten the operating life of the switch | Forbidden application |

## General requirements

The device is designed to be installed on industrial machineries. The installation must be performed only by qualified staff aware of the regulations in force in the Country of installation. The device must be used exactly as supplied, properly fixed to the machine and wired.
It is not allowed to disassemble the product and use only parts of the same, the device is designed to be used in its assembly as supplied. It is prohibited to modify the device, even slightly e.g.: replace parts of it, drill it, lubricate it, clean it with gasoline or gas oil or any aggressive chemical agents.
The protection degree of the device refers to the electrical contacts only. Carefully evaluate all the polluting agents present in the application before installing the device, since the IP protection degree refers exclusively to agents such as dust and water according to EN 60529. Thus the device may not be suitable for installation in environments with dust in high quantity, condensation, humidity, steam, corrosive and chemical agents, flammable or explosive gas, flammable or explosive dust or other polluting agents.
Some devices are provided with a housing with openings for connecting the electrical cables. To guarantee an adequate protection degree of the device, the opening that the wiring passes through must be protected against the penetration of harmful materials by means of an appropriate seal. Proper wiring therefore requires the use of cable glands, connectors or other devices with IP protection degree that is equal to or greater than that of the device.
Store the products in their original packaging, in a dry place with temperature between $-40^{\circ} \mathrm{C}$ and $+70^{\circ} \mathrm{C}$
Failure to comply with these requirements or incorrect use during operation can lead to the damage of the device and the loss of the function performed by the device itself. This will result in termination of the warranty on the item and will release the manufacturer from any liability.

## Using the devices

-Before use, check if the national rules provide for further requirements in addition to those given here.

- Before installation, make sure the device is not damaged in any part.
- All devices are designed for actuation by moving parts of industrial machines.
- Do not use the device as mechanical stop of the actuator.
- Do not apply excessive force to the device once it has reached the end of its actuation travel.
- Do not exceed the maximum actuation travel.
- Avoid contact of the device with corrosive fluids.
- Do not stress the device with bending and torsion.
- Do not disassemble or try to repair the device, in case of defect or fault replace the entire device.
- In case the device is deformed or damaged it must be entirely replaced. Correct operation cannot be guaranteed when the device is deformed or damaged.
- Always attach the following instructions to the manual of the machine in which the device is installed.
- If specific operating instructions exist for a device (supplied or downloadable from www.pizzato.com), they must always be included with the machine manual and be available for the entire service life of the machine.
-These operating instructions must be kept available for consultation at any time and for the whole period of use of the device.

## Wiring and installation

- Installation must be carried out by qualified staff only.
- Use of the device is limited to function as a control switch.
- Observe minimum distances between devices (if provided).
-Comply with the tightening torques indicated in this catalogue.
-Keep the electrical load below the value specified by the respective utilization category.
- Disconnect the power before to work on the contacts, also during the wiring.
-Do not paint or varnish the devices.
- Install the product on flat and clean surfaces only.
- Do not bend or deform the device during installation.
- Never use the device as support for other machine components (cable ducts, tubes, etc.)
-For installation on the machine, use the intended bore holes in the housing. The device must be fixed with screws of adequate length and resistance to the expected stress. At least two screws (fitted to holes most suitable for the intended use) are required to fix the housing to the machine.
- After and during installation, do not pull the electrical cables connected to the device. If excessive tension is applied to the cables (that is not supported by an appropriate cable gland), the contact block of the device may be damaged.
-Provided that the device has an electrical connector, always switch off the circuit voltage before disconnecting the connector from the switch. The connector is not suitable for separation of electrical loads.
- During wiring comply with the following requirements:
- for terminals (if present), comply with the minimum and maximum cross-sections of the conductors;
- tighten the electrical terminals (if present) with the torque indicated in this catalogue;
- do not introduce polluting agents into the device as: talc, lubricants for cable sliding, powder separating agents for multipolar cables, small strands of copper and other pollutants that could affect the proper functioning of the device;
- before closing the device cover (if present) verify the correct positioning of the gaskets;
- verify that the electrical cables, wire-end sleeves, cable numbering systems and any other parts do not obstruct the cover from closing correctly or if pressed between them do not damage or compress the internal contact block;
- for devices with integrated cable, the free end of the cable must be properly connected inside a protected housing. The electrical cable must be properly protected from cuts, impacts, abrasion, etc.
-After installation and before commissioning of the machine, verify:
- the correct operation of the device and all its parts;
- the correct wiring and tightening of all screws;
- the actuating travel of the actuator must be shorter than the maximum travel allowed by the device.
-After installation, periodically check for correct device operation.

## Do not use in following environments:

-Environments where dust and dirt can cover the device and by sedimentation stop its correct working.
-Environment where sudden temperature changes cause condensation.
-Environments where coatings of ice may form on the device.

- Environments where the application causes knocks or vibrations that could damage the device.
-Environment with presence of explosive or flammable gas or dust.

## Limits of use

-Use the devices following the instructions, complying with their operation limits and the standards in force.
-The devices have specific application limits (min. and max. ambient temperature, mechanical endurance, protection degree, utilisation category, etc.) These limits are met by the different devices only if considered individually and not if combined with each other. For further information contact our technical department.

- The utilization implies knowledge of and compliance with following standards: EN 60204-1, EN 60947-5-1, ISO 12100, EN ISO 14119.
- Please contact our technical department for information and assistance (phone +39.0424.470.930 / e-mail tech@pizzato. com) in the following cases:
- Cases not mentioned in the present utilization requirements.
- In nuclear power stations, trains, airplanes, cars, incinerators, medical devices or any application where the safety of two or more persons depend on the correct operation of the device.

## Additional requirements for safety applications

- Provided that all previous requirements for the devices are fulfilled, for installations with operator protection function additional requirements must be observed.
-The utilization implies knowledge of and compliance with following standards: IEC 60204-1, IEC 60947-5-1, ISO 12100, EN ISO 14119, EN 62061, EN ISO 13849-1, EN ISO 13850.
-The protection fuse (or equivalent device) must be always connected in series with the NC contacts of the safety circuit.
- Periodically verify the correct working of the safety devices; the periodicity of this verification is settled by the machine manufacturer based on the machine danger degree and it does not have to be less than one a year.
- After installation and before commissioning of the machine, verify:
-the correct operation of the device and all its parts;
- the correct wiring and tightening of all screws;
-the actuating travel of the actuator must be shorter than the maximum travel allowed by the device;
- the actuating travel of the actuator must be greater than the positive opening travel;
-the actuation system must be able to exert a force that is greater than the positive opening force.
- Devices with a safety function have a limited service life. Although still functioning, after 20 years from the date of manufacture the device must be replaced completely.
-The production date can be derived from the production batch on the item. Example: A19 FD7-411. The batch's first letter refers to the month of manufacture ( $\mathrm{A}=$ January, $\mathrm{B}=$ February, etc.) The second and third letters refer to the year of manufacture ( $19=2019,20=2020$, etc.)

## Features

The contact blocks developed by Pizzato Elettrica are the result of more than 30 years of development experience and millions of sold switches. The range of available contact blocks is one of the most extensive in the world in the sector of position switches.
This chapter introduces to some features of Pizzato Elettrica contact blocks, in order to give the final user a better understanding of the technologies behind that element simply named "contact".
We underline that contact blocks are not available for sale (to the public) separately from switches, both because some of them are mechanically connected to the switch and because some technical features may change in accordance with the switch and its function. The following data is only intended to serve as an aid for the initial selection of the contact block. It is not to be used for determining the characteristics of the switch that uses this contact block. For example, the use of a contact block with positive opening with a switch with flexible actuator results in the combination of the two devices not having positive opening.
In this chapter, the properties of the E1 electronic contact block are explained in detail. It is used with position switches with multiple monitoring tasks that would require extensive effort to realize with electronic sensors. There is no other electronic sensor on the market that can match this contact unit with respect to precision and repeatability, adjustment of the switching point, operating temperature and price.

## Description

Captive screws

Finger protection
3
Clamping screw plates for cables with various diameters

Self-lifting clamping screw plates
Material of the contacts: Silver alloy or gold-plated silver alloy

6
Contact technology and reliability: Single bridge, double bridge

7 Operating voltages and currents for reliable switching

## Description

Classification of the contact design acc. to EN 60947-5-1:
X, Y, C, Za, Zb
9
Contact type: Slow action / snap action / snap action
with constant pressure
10 Force on contacts
11 Positive opening of contacts

## Captive screws

Switches with this characteristic have clamping screws that remain in place even if completely unscrewed. This feature reduces wiring time, since the operator does not have to be careful not to unscrew the screws completely and does not risk to lose them by mistake, which is very useful in case of wirings in uncomfortable position

## Finger protection

All terminals in the contact blocks have protection degree IP20 in accordance with EN 60529, they are therefore protected against access to dangerous parts with a diameter greater than 12 mm .

## 3 Clamping screw plates for cables with various diameters

The clamping screw plates are provided with a particular "roofing tile" structure and are loosely coupled to the clamping screw. The design causes connection wires of different diameter to be pulled towards the screw when tightening the screw (see figure), preventing the wires from escaping towards the outside.

## 5 Contact material: gold-plated silver alloy

The contact blocks can be supplied with silver electric contacts with a special gold-plated surface, with total gold thickness of one micron. This type of treatment can be useful in environments which are aggressive against silver (very humid or sulphurous atmospheres) and in case of very small electric loads, usually with low voltages and supply currents. This thickness of the gold coating permits several million switching cycles.

## Self-lifting clamping screw plates

Switches with this feature are equipped with clamping screw plates that move up or down by turning the clamping screw; wiring is easier and faster as a result.

## 6 Contact technology and reliability

Very rarely, an electric contact does not function. A failed switching operation is a typical consequence of an exceptionally high contact resistance caused by dust, a thin layer of oxidation or other impurities that could penetrate the switch during wiring. Thus, the repeated occurrence of faulty switching depends not only on the sensor type, but also on its environmental conditions and the load that the switch drives. These effects are more evident with low electrical loads if the electric voltage cannot penetrate the thin layers of oxide or small grains of dust.
This type of malfunction can normally be tolerated with hand-operated devices, because repeating the operation is enough to restore the function. This is not the case with position switches, as severe machine damage could result if the end position is not ascertained.
In the following table we refer to two typical contact structures (type A and B) normally used in the industry and the ones which have been used by Pizzato Elettrica for several years in most switches: movable contacts with double interruption and twin bridge (type C)
As you can see from the table below, the last structure (type C) has the same contact resistance ( $\mathbf{R}$ ) as the simple mobile contact (type A), but with a lower failure probability (fe).
With a failure probability of $\mathbf{x}$ for a single switching operation, the failure probability for type $A$ is $\mathbf{f e}=\mathbf{x}$, for type $B \mathbf{f e}=\mathbf{2} \cdot \mathbf{x}$, whereas for type $C$ it is $\mathbf{f e}=\mathbf{4} \cdot \mathbf{x}^{\mathbf{2}}$
This means that if the probability of a switching failure is $x$ in a given situation, e.g.,
 $1 \times 10^{-4}$, ( 1 switching failure in 10,000 ), the result is as follows:

- for type A one failed commutation every 10,000.
- for type B one failed commutation every 5,000.
- for type C one failed commutation every 25,000,000.

| Type | Diagram | Description | Contact resistance R | Probability of errors fe |
| :---: | :---: | :---: | :---: | :---: |
| A |  | simple mobile contact | $R=R c$ | $f e=x$ |
| B | $\xrightarrow{0-1}$ | mobile contact with double interruption | $R=2 \cdot R c$ | $f e=2 x-x^{2}$ |
| C |  | mobile contact with double interruption and twin bridge | $R=\frac{2 \cdot R c}{2}=R c$ | $f e=4 x^{2}-4 x^{3}+x^{4}$ |

## Minimum operating voltages and currents for reliable switching

The reliability of an electric contact depends on several factors, whose influence varies depending on the type of load. For high power loads is necessary for the contact to be able to dissipate the heat generated during switching. For low power loads, instead, it is important that it oxides and other impurities do not obstruct the passing of the electric signal. As a result, the material chosen for the electric contacts is a compromise among different and sometimes contrasting needs. In position switches contacts are usually made of a silver that has proved to be suitable for the switching of loads in the range of approximately 1 kW to 0.1 W . However, at lower loads, the effects of the oxide, which silver naturally develops upon contact with air, may occur; additionally to be taken into account are possible contaminations or impurities in the contact switching chamber (for example the talc powder in the cable sheaths that an installer could accidentally insert in the switch may have a similar effect).

It is impossible to define a fix threshold above which the "missing switching phenomenon" does not appear, because there are a lot of mechanical end electric parameters that influence this value. For example, in laboratory environment a good twin bridge electric contact is able to switch loads in the $\mu \mathrm{W}$ range for dozens of millions of handling operations, without losing signals. However, this does not mean that the same contact will have the same performance when the switch operates in environments with sudden changes of temperature (condensation) or where few switching occur (oxidation).

In order to avoid this kind of problem, gold plated contacts are used for very low loads profiting from the non-oxidability of this material. The gold-plating layer should be thick enough to be mechanically resistant to switching as well as electrically resistant to possible sparks that may vaporize it. For this reason Pizzato Elettrica uses micron thickness gold plating suitable for millions of working cycles. Thinner gold plating layers have often a purely aesthetic function and are only suitable to protect the product against oxidation during long time storage.

The minimum current and voltage values recommended by Pizzato Elettrica are shown in the diagram below, that is divided into two areas defined by a steady power limit. These values identify voltage and current combinations with high commutation reliability in most industrial fields. The lower voltage and current limits shown in the diagram are typical minimum values for industrial applications. They may also be reduced in non typical conditions. It is recommended, however, to always evaluate that the signal power to be switched is at least one magnitude order higher than the noise produced in the electric circuit, in particular when circuit cables are long and pass through areas with high electromagnetic fields and especially for powers lower than 10 mW .

$\mathbf{1 0 0} \mathbf{~ m W}$ Suggested limit for general applications with snap action contact blocks with silver alloy contacts.
$\mathbf{2 0 0} \mathbf{~ m W}$ Recommended limit for general applications with slow action contact blocks with silver alloy contacts.

8 Classification of the contact block acc. to the EN 60947-5-1

## Electrically separated contacts

The " + " symbol between two designs (e.g., $X+X, Z a+Z a, X+X+Y$, etc.) represents the combination of simple, electrically separated contact blocks.
The electrically separated contacts allow different voltages to be applied between the contacts and loads to be connected to different polarities (figure 1).

## Requirements and restrictions for Za contacts

Electrical loads must be connected to the same phase or polarity. The contacts are not electrically separated. As a result, different voltages may not be applied to the NC and NO contacts (figures 2 and 3).
According to EN 60947-5-1 section K.7.1.4.6.1., the following restrictions apply for positive opening contacts of design Za when used for safety applications.
If the control switch has changeover contact element of design C or Za, only one contact element may be used (closure or interruption). For changeover contact elements of design Zb , both contacts may be used.

## Contact design Za

figure 2: correct

figure 3: incorrect

## 9 Contact blocks with different operating principle: slow action and snap action

Contact blocks with slow action: component where the speed of the contact movement ( $\mathbf{V} \mathbf{1}$ ) depends on the speed of the switch actuation (V). The contact carrier moves at a rate proportional to the actuation speed.
The slow action contact block is suitable for applications having low to medium currents and quick actuation movements. It has no differential travel.

## $\mathrm{V}=\mathrm{V} 1$

Contact block with snap action: component where the speed of the contact movement (V1) doesn't depend on the speed of the switch actuation (V). Upon reaching a predetermined point in the actuation travel, the contact carrier triggers and switches the contacts.
The snap action contact block is suitable for applications having high currents and/or slow actuation movements. This kind of contact block has a differential travel.

## $\mathrm{V} \neq \mathrm{V} 1$

## 10 Contact blocks: diagrams of the force on the contacts

The following diagrams show the relationship between of the force exerted on the contacts (F) and the actuation travel to the end position.

## Contact block with slow action

Contact block with snap action and constant pressure: 5, 11, 12.
The pressure on the contacts remains constant as the switching point is approached

Contact block with snap action: 2, 3, 17
The pressure on the contacts decreases as the switching point is approached

FR, FX, FP, FT series contact blocks

## Order procedures:

Purchasing orders must always be sent in writing (e-mail). We reserve the right to not accept e-mail orders in case of missing characteristics necessary to correctly identify the sender or to not process them in case of virus infected attachments or attachments of dubious origin.

## Minimum billing amount:

Unless specifically agreed, the minimum invoicing amount is EUR 200 net (VAT excluded). For invoices of less than EUR 200, a EUR 30 fee will be applied.
Invoices are issued weekly.

## Prices:

The prices quoted in the price list do not include VAT, custom taxes or any other charges. Unless otherwise agreed, the prices quoted in the price list are not binding and may undergo changes without prior notice.

## Order quantities:

Some products are shipped in packs. The ordered quantities of these items must be multiples of the quantities contained in the packages.

## Order cancellation/changes:

Order changes might be accepted depending on the job order status. Changes or cancellation of special article orders will not be accepted.

## Supply:

The supply includes only what is expressly stated in the order confirmation. As per article 1461 of the Italian Civil Code, we reserve the right to stop supply in case of changes in the customer's financial standing.

## Delivery:

The delivery is indicated in the order confirmation and reports the period in which the goods can be available at the factories of Pizzato Elettrica and not the date of arrival at the customer's premises. This date is an approximate value and cannot be used as a reason of the order non-fulfilment. A list of items in stock can be found at www.pizzato.com

## Packaging:

Packaging is free. For more than six boxes pallets can be necessary for the transport.

## Shipment:

Unless expressly agreed between the parties, Pizzato Elettrica ships goods X works, in accordance with Incoterms 2010 (published by the ICC). In the event that the customer requests transport against payment on the invoice, all parties agree that the goods always travel at the risk and peril of the customer. The customer must check that the forwarder delivers the number of boxes indicated in the delivery note, that the boxes are intact and that the weight corresponds to what is stated in the documents. In case of any inconsistencies, always accept the goods SUBJECT TO VERIFICATION, clearly specifying the type of damage. Any discrepancy or mistakes should be reported in writing within 8 days of receipt of the goods at info@pizzato.com.

## Warranty:

The warranty has a validity of 12 months starting from the shipping date of the material. The warranty does not cover improper use of the material, negligence or wrong installation/assembling. The warranty does not cover parts subjected to wear or products used beyond the technological limits described in the catalogue, or items that have not received the right maintenance. Pizzato Elettrica engages itself to repair and/or replace parts or the complete product for those elements that present evident manufacturing defects, provided that they are still covered by warranty. Pizzato Elettrica is only responsible for the value of the product and requests for compensation due to machine downtime, repairs or costs for direct or indirect damages resulting from product malfunctions will not be accepted, even if these occur during the warranty period. It is the responsibility of the manufacturer to evaluate the importance of the products used and the possible damage caused by their malfunction and to adopt the necessary technical measures to minimize consequences on machines also for personal safety purposes (redundancy systems, selfcontrolled systems, etc). The warranty will be subject to the customer's compliance with the payment terms.
Any samples provided free of charge or bearing the phrase "SAMPLE" must be considered as purely demonstrative and are not covered by the guarantee.

## Products:

Products can be subjected to technical improvements in any moment without prior notice.

## Payment terms:

Payments should be settled within the terms agreed in the order confirmation. The payment method is always at the risk of the buyer, regardless of the means chosen. In case of delayed payment, Pizzato Elettrica reserves the right to stop the delivery of any current orders and charge interest at the rate envisaged by European Directive 2011/7/EU. Any technical or commercial complaints do not entitle the claimant to suspend the due payments.

## Returns:

Any products returned for any reason will not be accepted unless they are previously APPROVED and AUTHORISED in writing.
Otherwise, Pizzato Elettrica reserves the right to reject the goods and return them "freight collect" at the expense of the buyer, in the same way by which they were forwarded. Returns have to be sent back within 3 months from the authorization date and no later. After this period, returns will not be accepted. The request to return goods will lead to their sales price being devalued and will be considered if relative to standard items and materials shipped no more than 12 months ago. The returned goods and the relative packaging must be intact and free from damage.

## Ownership:

The delivered products remain property of Pizzato Elettrica until full settlement of the invoices.

## Proper Law:

The Court of Vicenza shall have jurisdiction in any disputes.
For the updated terms of sale, please consult the website www.pizzato.it
